

# Matrix Maker Quick Start Manual

First time programing a key

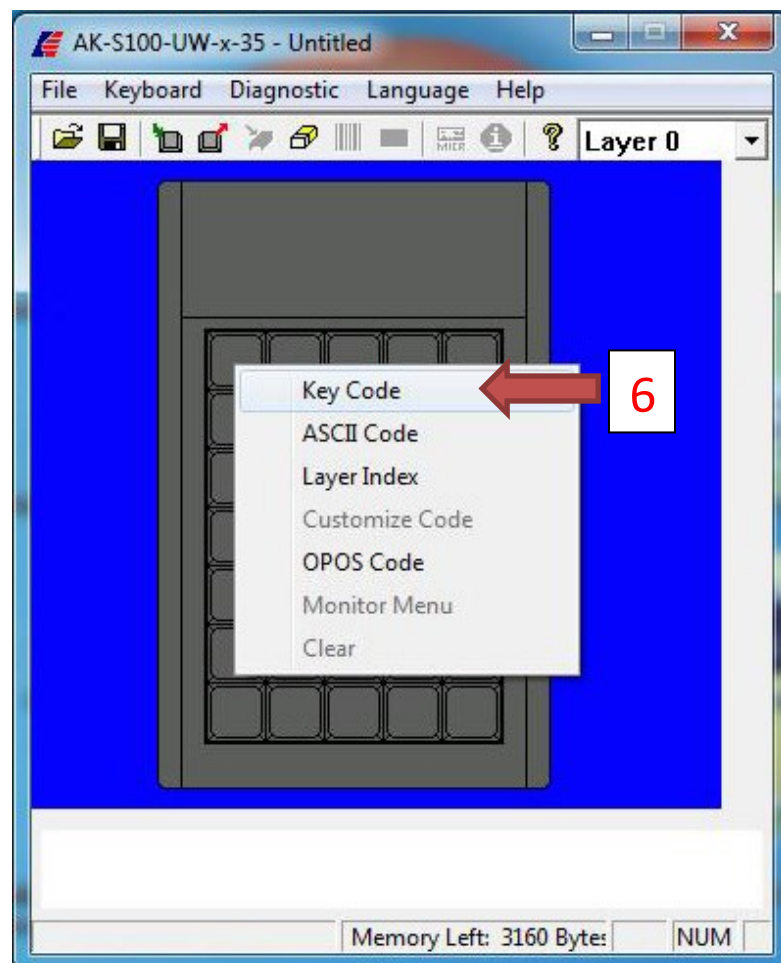

V1.0

1. Plug your keyboard to the PC
2. Start Matrix Maker Software
3. Choose your Interface
4. Choose your Keyboard

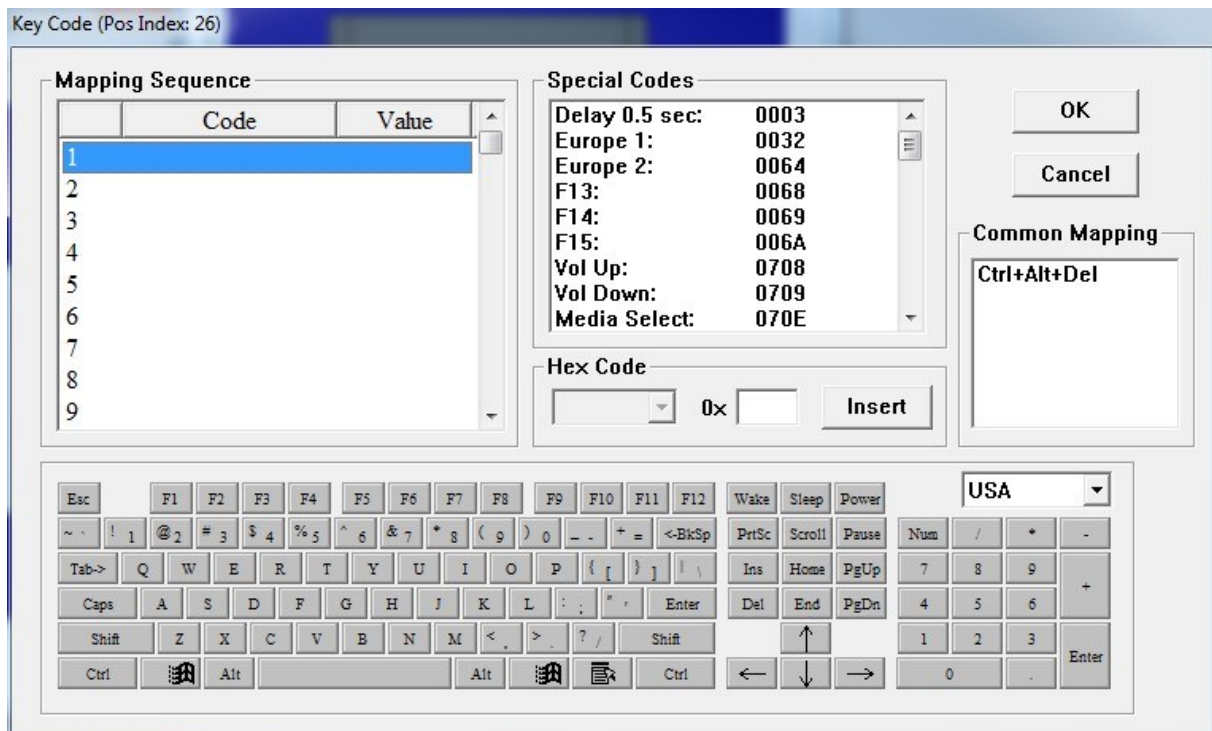

3

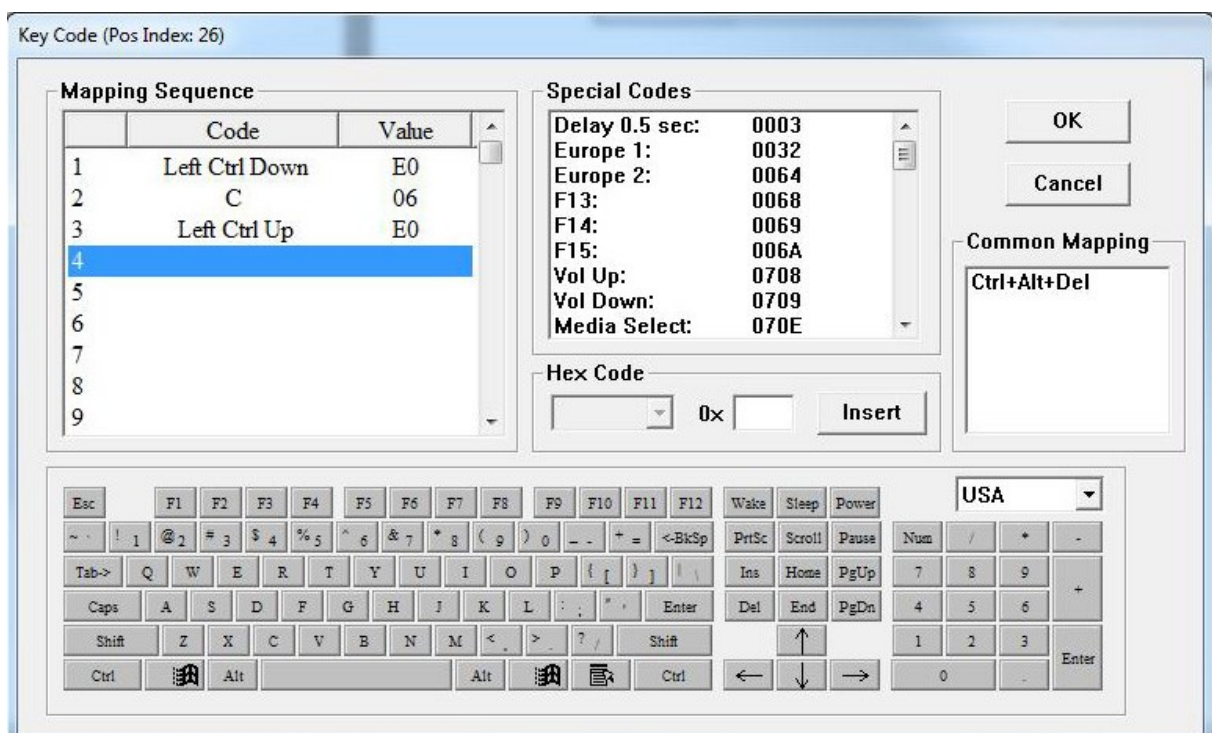

5. You can see the layout of your keyboard
6. Left-click on a button and choose “Key Code”

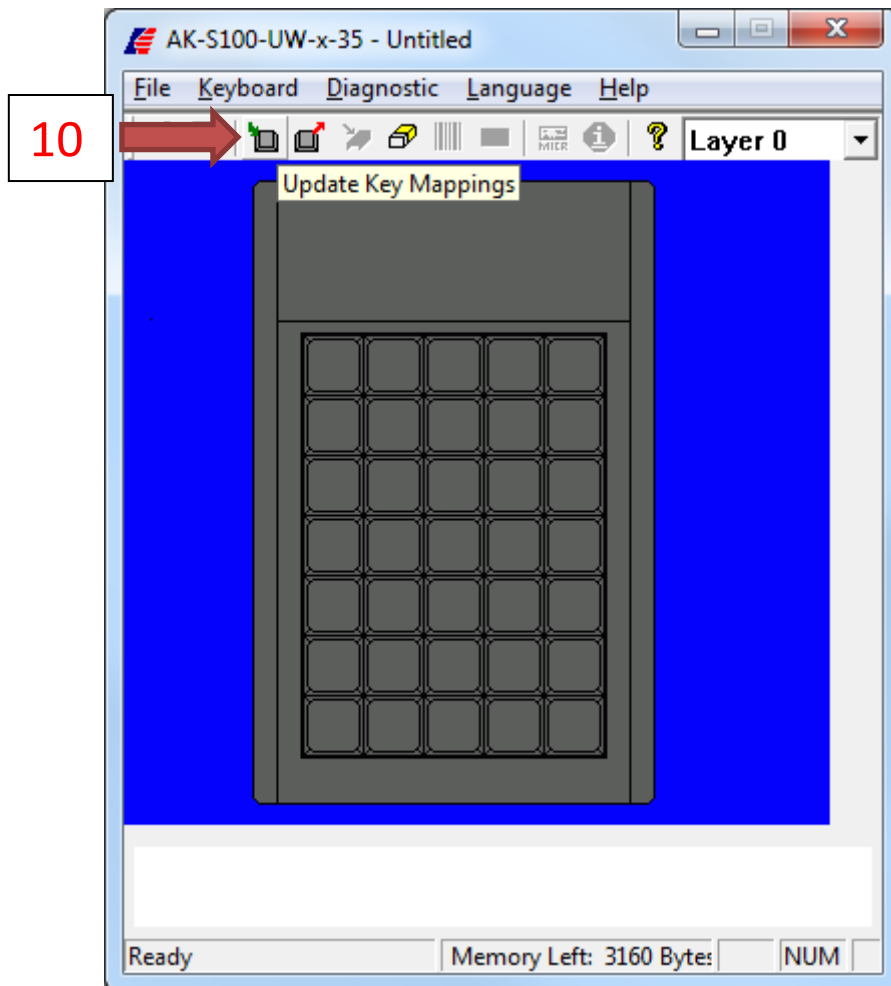

7. You can see the programming Window

8. By clicking the keys on the virtual keyboard you can program short cuts or anything else possible to type with a normal keyboard.  
Attention: CTRL, SHIFT and ALT Key have a Down and Up state. If you don't end with the Up state the key is looped.
9. When you are done press "OK"

10. Send your programming from “Matrix Maker” software to the keyboard by clicking “Update Key Mapping”

11. Open Windows Notepad and press the programmed key to check your programming.  
Attention: If you want to change or add programming later on you first have to load the existing programming of the keyboard to Matrix Maker software. Else you will lose the programming that is already stored in your keyboard.

12. Load programming from keyboard to Matrix Maker software by clicking “Retreive Keyboard”  
After retrieving you can see highlighted keys in which already programing is stored and edit them. After editing you have to send the new programing back to the keyboard. See step 10.
